

Run Adabas & Natural on containers and the cloud

Fact sheet

Adopt a modern IT infrastructure

Businesses are continuously adopting containers and the cloud as key components of their IT infrastructure strategies. Containers package up code and dependencies as a unit of software that can be run quickly and reliably on any computing environment. This gives you the freedom to move to the cloud to deliver applications faster with more flexibility and scalability.

By moving Adabas & Natural applications to containers, such as like Docker® and Kubernetes®, you can choose the best deployment model whether it is on-premises or a private or public cloud.

Migrating your application workload to a modern IT infrastructure can be an iterative approach that follows your business strategy and goals. You will also benefit from improved scalability, availability, performance, deployment and operations with this infrastructure. Combining container and cloud with DevOps and the Eclipse™-based NaturalONE development environment puts you in an excellent position to address changing business requirements and innovate faster.

Get ready to leverage containers and cloud platforms

1. Add value with DevOps

Accelerate application delivery by combining NaturalONE with DevOps to integrate with containers and the cloud.

2. Embrace modern architecture

Re-architect your Adabas & Natural applications from monolithic architectures to a microservices architecture.

3. Drive operational efficiency

Shift your Adabas & Natural applications to containers and the cloud to achieve costs savings and operational efficiency.

4. Implement a multi-cloud strategy

Avoid vendor lock-in by leveraging containers that allow you to switch among private and public cloud platforms.

5. Achieve business agility

Respond quickly to customer requests for bug fixes or new features with lightweight containers that you can create within seconds.

6. Prepare for the future

Meet the demands of digital business for scalability, availability and responsiveness with containers and the cloud.

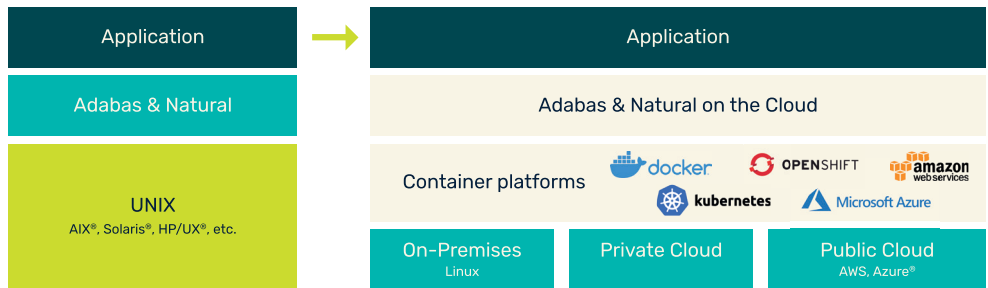

Let's talk

What can shifting Adabas & Natural applications to containers and the cloud do for you?

- Harmonize your IT infrastructure portfolio
- Provision and deploy applications more easily
- Give developers and operations more speed and efficiency
- Move from a monolithic application architecture to a modern microservices architecture
- Avoid platform vendor lock-in by following a multi-cloud strategy
- Maximize the benefits of improved scalability, availability and performance of operating in containers and the cloud

Take the next step

Containers and the cloud are the most impactful infrastructure technologies today. Leveraging these modern infrastructures for mission-critical Adabas & Natural applications will bring your development and operations to a new level and meet the increasing demands of becoming a digital business. Get started now!
